

# FRY 3.0

ONE TOKEN. EVERY FUNCTION.

FRY 3.0 replaces four legacy tokens with a single Algorand asset — powering miner rewards, DAO governance, dApp fees, and project revenue across the entire Fry Networks ecosystem.

<b>6B</b> MAX SUPPLY	<b>\$0.005</b> LAUNCH PRICE
<b>5M</b> FRY / WEEK START	<b>50/50</b> BURN / TREASURY
<b>∞</b> POOL LIFETIME	<b>0</b> REG STAKE REQUIRED

01

## WHY 3.0

Two prior token generations taught hard lessons. FRY 3.0 is built on what broke.

<p><b>FRY 1.0 — THE MISTAKES</b></p> <p>8 billion supply. Max supply locked on a 70-year unlock schedule — annual token floods crushed price action and exhausted the reward pool. No freeze or clawback on the ASA meant stolen tokens were gone forever.</p>	<p><b>FRY 2.0 — THE LIMITS</b></p> <p>2 billion supply. Freeze and clawback restored. But the four-token model (FRY 2.0, fNODE, fVPN, tFRY) fragmented liquidity and confused onboarding. After FIP-016 consolidated all miners into FEM, four tokens for one miner made no sense.</p>	<p><b>FRY 3.0 — THE FIX</b></p> <p>6 billion supply. One token, all functions. Perpetually sustainable emission model — no unlock cliffs. No registration stake — mine immediately. LP-based verification staking deepens DEX liquidity automatically.</p>

02

## TOKEN ECONOMICS

6 billion tokens across eight allocation pools with defined vesting, a 15% annual emission decay, and a hybrid burn that removes supply permanently.

### ALLOCATION

Mining Rewards	45%	2,700,000,000
Team (4yr vest)	15%	900,000,000
Treasury (DAO)	12%	720,000,000
Legacy Conversion	10%	600,000,000
DEX Liquidity	8%	480,000,000
Ecosystem / Airdrops / Advisors	10%	600,000,000

### EMISSION SCHEDULE (NRE)

The Mining Rewards Pool emits 5,000,000 FRY per week at launch, decaying 15% each year. The pool is split among all online, healthy, registered FEM devices — fewer devices means higher per-device rewards. FEM launches with zero registrations, so early adopters earn dramatically more.

100 DEVICES

~38,462

FRY/week (1x)

500 DEVICES

~8,333

FRY/week (1x)

10,000 DEVICES

~385

FRY/week (1x)

50,000 DEVICES

~77

FRY/week (1x)

PERPETUAL POOL

The 15% annual decay converges to ~1.73B total emitted. Since the pool holds 2.7B, it never depletes — ~967M FRY remains as a permanent reserve for future DAO decisions.

03

# STAKING & CLAIMS

Amplify rewards with FRY 3.0/USDC LP token stakes. Choose between instant payout (30% fee) or full value after 1-month maturation.

## VERIFICATION STAKE MULTIPLIERS

Stake FRY 3.0/USDC liquidity pool tokens per device. Short locks need more capital; long locks need less. Multiplier stays active until you withdraw — lock expiry alone does not revert it.

TIER	LOCK	LP STAKE	MULTIPLIER
Unregistered	—	—	0x
Registered	None	0	1x
24-hour lock	24h min	≥ 25,000 FRY + USDC (~\$250)	1.5x
6-month lock	6mo min	≥ 5,000 FRY + USDC (~\$50)	3x

## INSTANT VS MATURED CLAIMS

INSTANT CLAIM

70%

Receive 70% of earned rewards immediately. 30% fee collected — a portion flows to Fry Fee Genesis NFT holders.

MATURED CLAIM

100%

Wait 1 month. Receive 100% of earned rewards with zero fee. Patient operators keep everything.

Epochs end every Friday (FRYday). Rewards appear in the Fry dashboard and must be manually claimed to the operator's chosen Algorand address.

04

# FRY EDGE Miner

One desktop app. Five partner integrations. Toggleable. No registration stake. No IP or location limits on FEM itself — partner-specific restrictions are auto-disabled when thresholds are exceeded.

INTEGRATION	VERTICAL	RESOURCE
Mysterium	VPN / Bandwidth	Network bandwidth via MystNodes VPN
Presearch	Search	Decentralized search query processing
Diiisco	AI / Compute	Local AI model inference
SpaceAcres	Storage	Disk space for Autonomys Network

Olostep

Data Collection

Web scraping &amp; structured data extraction

Devices prove uptime via Proof of Connectivity (PoC) — 144 ten-minute health-check slots per day. More active integrations and higher uptime mean a larger share of each weekly epoch. All partners pay Fry Networks in FRY 3.0; payments made in other assets are manually converted.

05

## Governance & Fees

Token-weighted DAO voting with super majority and hidden vote mechanisms. Community-submitted proposals (cFIPs) alongside founder FIPs. Hybrid fee burn with Genesis NFT fee distribution.

### DAO VOTING

Voting is separate from verification staking. Each vote costs 1 FRY 3.0 staked for 6 months in the DAO contract — 100 votes means 100 FRY locked. Proposal types determine the voting mechanism: simple majority for standard FIPs, super majority for high-impact changes, hidden votes for sensitive proposals.

### COMMUNITY FIPS (CFIPS)

Any community member can submit a cFIP via [vote.frynetworks.com](https://vote.frynetworks.com) with Discord OAuth and a minimum FRY 3.0 stake. Each cFIP goes through discussion → temperature check → founder review → official vote. One revision allowed. Rate-limited to prevent spam. 90-day cooldown on resubmission.

### FEE DISTRIBUTION & BURN

Protocol fees flow through Genesis NFT allocations first, then the remaining balance enters the hybrid burn: 50% permanently destroyed, 50% to DAO treasury. The ratio is DAO-adjustable.

COLLECTION	SUPPLY	FEE SOURCE
fry.farm Genesis	1,000	10% of fry.farm platform fees
Fry Fee Genesis	2,000	Portion of the 30% instant claim fee
fry.market Genesis	TBD	fry.market marketplace fees (planned)

06

## Token Migration

Snapshot-based conversion on the day FIP-017 passes. All converted tokens vest linearly over 12 months. Unclaimed legacy rewards at snapshot are nullified.

FRY 2.0 (ASA 2485314946)	→ FRY 3.0	1 : 1
fNODE (ASA 2485202024)	→ FRY 3.0	1 : 1
tFRY (ASA 2681521901)	→ FRY 3.0	1 : 1
fVPN (ASA 2485198745)	→ FRY 3.0	1 : 1
FRY 1.0 (Legacy)	→ FRY 3.0	80 : 1

#### 12-MONTH VESTING

All converted tokens vest linearly over 12 months from launch (1/12th monthly). Vesting starts at launch for everyone — **claiming later does not extend the schedule**. Late claimers receive vested-to-date immediately. 12-month claim window; unclaimed tokens transfer to DAO treasury.

07

# Roadmap

## PHASE 1 — FEM + PRESALE

Q3 2026

FEM software release. FRY 3.0 presale. Blockchain snapshot (FIP-017). ASA creation. Conversion contract + migration interface deployed. Initial DEX liquidity seeded.

## PHASE 2 — FRY 3.0 LIVE

Q4 2026 — Q1 2027

First FRYday epoch. All dApps denominated in FRY 3.0. Hybrid burn live. Fry dVPN development begins. Ecosystem grants + community airdrops launch.

## PHASE 3 — SCALE

Q2 — Q4 2027

Fry dVPN production launch (dual-VPN revenue for operators). Solana cross-chain bridge. 50K+ device target. FEM on macOS + Linux. DEX aggregator integrations.

## PHASE 4 — MATURITY

2028+

Full DAO governance transition. 100K+ devices. Additional L1/L2 bridges. Institutional infrastructure services. Mobile FEM exploration.

## FRY 3.0
